

University Orthopedics

East Providence, Rhode Island

Project Goals

Our goal was to expand our access and provide our patients with a state of the art, innovative facility that is focused on the patient experience.

Our new facility offers comprehensive orthopedic care across all subspecialties of orthopedics: cartilage replacement, foot and ankle, hand and wrist, joint replacement, pediatrics, orthopedic oncology, spine, sports medicine, shoulder and elbow, trauma and fractures.

Every suite was designed to support the needs of the orthopedic specialty it serves. An Ambulatory Surgical Center, state-of-the-art diagnostic imaging, hand therapy, and physical therapy complete the comprehensive scope of services offered.

Project Benefits

This project has allowed each orthopedic specialty to reside in one location, providing a comprehensive well-thought-out patient experience.

Favorite Space

Our favorite areas include the hand therapy room with the clean lines of the furniture and the floor-to-ceiling windows. We also love the employee break rooms with the café height tables overlooking the bay and the golf course. It is a perfect place to take a well-deserved break.

What Matters

When looking at the overall design plan, the patient experience was very important. Second to that was maintaining a budget and completing the project on time. W.B. Mason assisted us with achieving these goals.

“The project was an overwhelming success. The collaboration with W.B. Mason resulted in a design that featured comfortable patient areas and efficient, bright work spaces for our employees and physicians.”
